Purvesh Shinde

+91-930-710-8047 | shindepurvesh007@gmail.com | linkedin.com/in/purvesh-shinde | github.com/PurveshShinde

Summary

Computer Science graduate with hands-on experience in full-stack development, DevOps, and backend architecture. Proficient in Java, Python, and JavaScript with practical exposure to Git, Docker, and microservices. Strong foundation in Data Structures, Algorithms, and distributed systems design.

Education

Dnyanshree Institute of Engineering and Technology (DIET)
Bachelor of Engineering in Computer Science & Engineering | *DBATU* — *Nov 2022 – Jul 2026*

Experience

Software Developer Intern — Feb 2026 – Jul 2026
Octane Cybersafe Pvt. Ltd. — *Remote*

- Served as primary developer and lead tester on a **production-grade** cross-platform mobile security app (Flutter, Java), delivered **on schedule**.
- Built and validated a threat-scoring engine evaluating app permissions, install source, and network activity to flag malicious apps.
- Designed and tested a motion-based anti-theft feature using accelerometer/gyroscope data to detect device-snatching and trigger auto-lock; also tested APK/ZIP scanning and cache-cleaning utilities.

AI/ML Team Lead – Virtual Internship — Jul 2024 – Aug 2024
IBM SkillsBuild — *Remote*

- Led a 4-member team to design and integrate an interactive customer support chatbot into a custom e-commerce (coffee shop) web application.
- Configured structured conversational pathways and decision trees using IBM Watson Assistant to guide users through multi-step service options.
- Integrated the chatbot's REST APIs with the frontend, establishing a seamless client-server architecture for real-time query resolution.

Technical Skills

Programming Languages: Java, Python, TypeScript, JavaScript
Backend: Spring Boot, Node.js, FastAPI, REST APIs, WebSockets
Frontend/Mobile: React.js, Tailwind CSS, Flutter
Databases: PostgreSQL, MongoDB, Redis
DevOps & Tools: Docker, GitHub Actions, Git, Linux
Core Computer Science: Object-Oriented Programming, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Prompt Engineering

Projects

GitMatch (Final Year Project) | *React, Node.js, Socket.io, MongoDB, JWT* | Live Demo — 2025 – 2026

- Developed a real-time developer collaboration platform integrating external APIs for live matching.
- Implemented Firebase Authentication with JWT-based authorization to secure APIs and user sessions.
- Designed scalable MongoDB collections for user profiles and deployed the frontend seamlessly on Vercel.

Taskify | *MERN, TypeScript, JWT, OAuth, Tailwind CSS* | Live Demo — 2025

- Engineered a production-ready full-stack task management application utilizing the MERN stack and TypeScript.
- Integrated Google OAuth and role-based access control (RBAC) for secure, hierarchical user management.
- Architected modular REST APIs to support a scalable client-server environment and real-time data flow.

TaskPulse | *Python, FastAPI, Docker, Redis, PostgreSQL, CI/CD* | GitHub — 2026

- Architected a distributed system comprising five containerized microservices orchestrated via Docker Compose.
- Designed asynchronous event-driven communication using Redis as a message broker to decouple API services.
- Configured GitHub Actions CI/CD pipelines to automate testing and validate multi-stage Docker builds.

Certifications

Google Cloud | Prompt Design in Vertex AI
Red Hat (DO101) | Introduction to OpenShift Applications
Red Hat (RH104) | Red Hat Linux Technical Overview
JPMorgan Chase (Forage) | Software Engineering Virtual Experience
Udemy | The Complete JavaScript Course: From Zero to Expert

Achievements

- **Leadership:** Directed a 10+ member team as the Communication Skills Club Representative, organizing and executing club events.
- **Mentorship:** Guided junior engineering students in academic coursework and foundational software project development.
- **Project Management:** Acted as Team Lead for the final year capstone project, successfully coordinating tasks and ensuring end-to-end delivery.
